

CTU - Automated PDF Data Extraction and Consolidation

Problem Statement

CTU - Downloading PDFs from the website <https://www.ctuil.in/regenerators> . Some of these PDFs are published on a weekly basis, while others are published daily. In total, there are 17 government websites from which data needs to be collected.

The requirement is to download the PDFs, extract the data, and consolidate it into a specific Excel sheet. The extracted data must be added in a well-structured manner. For example, columns 1 to 5 will contain data from Website 4, columns 6 to 8 will contain data from Website 7, and so on. This process must be repeated for all 17 websites until the Excel sheet is fully populated.

Objective

To download PDFs from 17 government websites (daily and weekly basis), extract data, and consolidate into a structured Excel sheet.

Scope

- Download all available PDFs (historical and ongoing).
- Extract data from both scanned and digital PDFs.
- Map extracted data from different websites into defined Excel columns.

Functional Requirements

1. Data Source

- 17 government websites.
- Example: <https://www.ctuil.in/regenerators>.
- No captcha or login required.

2. Data Download

- Automate download of PDFs (daily/weekly).
- Cover all previous and current data.

3. Data Extraction

- Extract content from PDFs with varying structures.
- Handle both scanned and digital PDFs.

4. Data Consolidation

- Insert extracted values into a structured Excel sheet.
- Specific columns are mapped to specific websites (e.g., columns 1–5 from Website 4, columns 6–8 from Website 7, etc.).

Notes:

- Each website provides PDFs with a **different structure**.
- Some PDFs are **scanned**, while others are **digital**.
- Since the websites are government portals, **APIs (if available) need** to be checked for data scraping.
- Currently, there is no CAPTCHA or login requirement.
- The solution must handle not only ongoing daily/weekly PDFs but **also all historical data** available on these websites.
